

Breeze Presenter, FlashPaper, CutePDF Writer

Extended Education and Outreach Distance Education Luncheon – February 2006

by Sydney Brown, Kerri Hiatt and Terry Workman

Breeze Presenter for PowerPoint

Macromedia Breeze Presenter is a Microsoft PowerPoint plug-in allowing you to easily record, edit and synchronize digital audio with PowerPoint slides to create web-based Flash (swf) presentations that can be streamed over the Internet from a website, loaded into Blackboard or saved on CD-ROM. Presentations can also be enhanced with interactive quizzes and surveys.

Breeze Presenter makes it possible to post interactive PowerPoint presentations in a format that almost all web users can access. Viewers can hear you discuss your topic, play back the slides, skip through the presentation, rewind a few seconds, complete a search of the text in the presentation, and more.

The Breeze license purchased by UNL allows free download, installation and use of Breeze Presenter:

1. **Register for an Account:** Faculty account creation is handled by Lisa Bogus (472-9050, lbogus3@unl.edu). She does not provide any training or support.
2. **Install the Breeze Presenter software:** once you receive your account information, you need to download and install the Breeze Presenter software. <http://breeze.unl.edu/common/help/en/support/startmain.htm>
Click on the *Install Macromedia Breeze Presenter* link. You will be prompted to enter your Breeze username and password. Once you enter that information, you can download the software. Breeze Presenter is installed as a menu in Microsoft PowerPoint.

FlashPaper 2

FlashPaper 2 is perfectly suited for non-technical users who simply need to create, share and distribute documents in a secure, compact, universal format. FlashPaper lets you create universally accessible files that are viewable on any platform. *Flash documents load instantly so **there's no need to download, install, and wait for a separate reader application to display your documents.*** FlashPaper 2 is one of the best ways to provide virtual handouts for your audience—a participant can print a copy of any document you share with them. To create FlashPaper 2 documents that work properly with Breeze, you must install the Macromedia FlashPaper 2 print driver available from the Breeze Getting Started page linked from your Breeze Home page. Once you have installed FlashPaper, just print your document to FlashPaper format, save the resulting SWF file, and load it in your meeting room.

CutePDF Writer

Portable Document Format (PDF) is the standard for the secure and reliable distribution and exchange of electronic documents and forms around the world. CutePDF Writer (formerly CutePDF Printer) is the free version of commercial PDF creation software. CutePDF Writer installs itself as a "printer subsystem".

Creating a PDF document is very easy with this free software. You will need to download the CutePDF Writer software and the converter software. When you are ready to create a pdf file, all you need to do is select Print from any application, choose CutePDF Printer, and the software saves his new PDF to the drive you specify. Best of all, despite being freeware, the software doesn't include any annoying ads or marring watermarks. This enables virtually any Windows applications (must be able to print) to create professional quality PDF documents - with just a push of a button!

Learn more and download the software at <http://www.cutepdf.com/Products/CutePDF/writer.asp>
